

I am a neurologist specializing in the treatment of epilepsy. Much of my professional life has been dedicated to building the clinical programs of the UCSF Epilepsy Center. My research is aimed at improving the diagnosis and treatment of people with hard-to-treat epilepsy. My teaching is centered on clinical epilepsy education for fellows, residents, and students. My university service has been focused on assuring opportunities for students and faculty across the campus. In my role as Associate Dean for Academic Affairs, I am involved with academic review and faculty development for the School of Medicine.
